

Pressure Control Valves

Pressure Reducing Valves DM 662

Universal Valve for Medium Flow Rate

Technical Data

Connection DN	15 - 25
Connection G	1/2 - 1
Nominal Pressure PN	100
Inlet Pressure	up to 100 bar
Outlet Pressure	0.02 - 12 bar
K _{vs} -Value	3.2 - 3.6 m ³ /h
Temperature	130 °C
Medium	liquids and gases

Description

Self-acting pressure reducers are simple control valves offering accurate control while being easy to install and maintain. They control the pressure downstream of the valve without requiring pneumatic or electrical control elements.

The DM 662 pressure reducing valve is a diaphragm-controlled spring-loaded and balanced proportional control valve for universal application and medium volumes.

This pressure reducer is manufactured from deep-drawn stainless steel featuring excellent corrosion resistance. The valve cone is fitted with a soft seal.

The spring module comprising spring cap, spring, adjusting screw, diaphragm and internal components, is connected to the valve body only by means of a clamp ring and two bolts. Changing the diaphragm or the complete spring assembly for a different control pressure range is extremely simple and does not call for special tools. The same applies to servicing and maintenance.

The outlet pressure to be controlled is balanced across the control unit by the force of the valve spring (set pressure). As the outlet pressure rises above the pressure set using the adjusting screw, the valve cone moves towards the seat and the volume of medium is reduced. As the outlet pressure drops, the valve control orifice increases; when the pipeline is depressurised, the valve is open. Rotating the adjusting screw clockwise increases the outlet pressure.

A sense line is required for outlet pressures ≤ 1.1 bar (to be installed on-site).

These valves are no shut-off elements ensuring a tight closing of the valve. In accordance with DIN EN 60534-4 and/or ANSI FCI 70-2 they may feature a leakage rate in closed position in compliance with the leakage classes V optional IV:

Leakage class IV (PTFE seal cone) = 0.01 % K_{vs} value

Leakage class V (soft seal cone) = $1.8 \times 10^{-5} \times \Delta p \times D^*$ [l/h]

*D=seat diameter

Standard

- » all stainless steel construction
- » non rising adjusting screw
- » quick-release body clamp ring
- » sense line connection (only for outlet pressures ≤ 1.1 bar)
- » balanced cone for controlling the outlet pressure independently from the initial pressure

Options

- » pressure gauge connection
- » pneumatic actuation
- » for toxic or hazardous media: sealed spring cap complete with leakage line connection (incl. sealed adjusting screw). Must be installed with a leakage line capable of draining leaking medium safely and without pressure
- » various diaphragm and seal materials suitable for your medium
- » special connections: Aseptic, ANSI or JIS flanges, NPT, welding spigots; other connections on request
- » special versions on request

Operating instructions, know how and safety instructions must be observed. All the pressure has always been indicated as overpressure. We reserve the right to alter technical specifications without notice.

Dimensional Drawing

Recommended Installation

- 1 Strainer
 - 2 Shut-off Valves
 - 3 Pressure Reducer
 - 4 Safety Valves
 - 5 Pressure Gauge
 - 6 Sense Line G 3/8 (option)
 - 7 Leakage Line G 1/8 (option)
- sense line connection 10 - 20 x DN behind the valve
